PROFILE

Data analyst and machine learning practitioner with a Master's degree in Computer Science (CGPA 4.38/5). Since April 2026, I have been responsible for sales, import and export data analysis at Farmington Commodities, using Power BI and SQL. Two years of applied research experience as a Research Assistant (CApIC-ACE, Covenant University), with two peer-reviewed co-authored papers. Hands-on experience building end-to-end ML pipelines (telecom fraud detection on imbalanced data, churn prediction, financial time-series forecasting) deployed through Streamlit. Certified in Digital Forensics and Digital Safety and Security (2026).

CORE SKILLS

Machine Learning : imbalanced-class classification, Random Forest, logistic regression, gradient boosting, PyTorch (LSTM/RNN), scikit-learn, evaluation (ROC-AUC, precision, recall), explainability (XAI)

Data Analysis & BI : SQL, MySQL, Power BI, Microsoft Excel, Pandas, NumPy, Matplotlib, Streamlit

Statistics : statistics and probability, time series, walk-forward validation, statsmodels, bibliometric analysis

Languages & tools : Python, SQL, Java, C++, C, Git

Digital security : Digital Forensics, Digital Safety and Security

Soft skills : scientific writing, technical communication, research collaboration

PROFESSIONAL EXPERIENCE

Data Analyst | Farmington Commodities Apr 2026 – Present

Import, sale and export of food commodities

- Collect, analyze and monitor sales, import and export data to steer commercial activity.
- Build Power BI reports and dashboards powered by SQL queries for management.

Research Assistant | CApIC-ACE, Covenant University Oct 2023 – Oct 2025

Covenant Applied Informatics and Communication – Africa Centre of Excellence, Ota, Nigeria

- Conducted applied research in machine learning and explainable AI, resulting in two peer-reviewed publications (international conference and scientific journal).
- Assessed the robustness and faithfulness of Vision Transformer explainability methods on degraded images (blur, noise) using perturbation metrics (insertion, deletion, max-sensitivity).
- Carried out a large-scale bibliometric analysis of benchmark datasets in ML research (Scopus, 2001–2024): usage trends and citation impact, using statistical methods.
- Wrote scientific papers and presented results at a conference (ICIIP 2025, Jaypee University).

TECHNICAL PROJECTS

Telecom Fraud Detection System *(personal project)* Apr 2026

- Built a fraud classification pipeline from behavioral features and call patterns, with categorical encoding and transformations suited to a highly imbalanced target class.
- Trained and compared several models (including Random Forest) in a modular data → model → deployment pipeline.
- Deployed a Streamlit interface for real-time fraud scoring and decision support.

Stack : Python, scikit-learn, Pandas, Random Forest, Streamlit

Telecom Customer Churn Prediction App *(personal project)* Apr 2026

- Developed a churn prediction pipeline with feature engineering and preprocessing of telecom customer data.
- Evaluated models with ROC-AUC, precision and recall (class imbalance); delivered a Streamlit dashboard for real-time customer risk scoring.

Stack : Python, scikit-learn, logistic regression, Random Forest, Streamlit

ESG Financial Time-Series Forecasting & Strategy Backtesting *(personal project)* Aug 2026

- Compared naive baselines, Ridge, gradient boosting and LSTM (PyTorch) on 20+ causal features, free of look-ahead bias, with purged walk-forward validation (5 chronological folds).
- Developed a backtester including transaction costs and slippage; evaluated with RMSE, rank IC, Sharpe, Sortino and maximum drawdown.

- Documented four failure modes in a written report.

Stack : Python, PyTorch, scikit-learn, pandas | Code: github.com/Suitret/esg-ts-strategy

Udemy Course Recommendation App *(personal project)* Jan 2026

- Designed a content-based recommendation system with an interactive Streamlit search interface.

Stack : Python, TF-IDF, cosine similarity, Streamlit

PUBLICATIONS

Explaining Vision Transformers with Perturbation-Based XAI: A Study on Robustness to Blurry and Noisy Images Jan 2026
International Conference on Image Information Processing (ICIIP)

- Study of the robustness and faithfulness of explainability methods under image degradation, using perturbation metrics.

A Bibliometric Analysis of Benchmark Datasets in Machine Learning Research: Insights from Scopus (2001–2024) Nov 2025
NIPES – Journal of Science and Technology Research

- Large-scale bibliometric analysis of benchmark datasets in ML (usage trends, citation impact).

EDUCATION

Master's in Computer Science | Covenant University, Ota, Nigeria Oct 2023 – Oct 2025
CGPA: 4.38/5. Machine Learning, AI, NLP, Data Science, database management systems, software engineering.

Bachelor's in Computer Science | University of Abomey-Calavi (IMSP), Dangbo, Benin Oct 2018 – Aug 2022
CGPA: 3.5/5. C/Python/Java programming, linear algebra, statistics and probability.

CERTIFICATIONS & PROFESSIONAL DEVELOPMENT

- Digital Forensics, Atingi (2026)
- Digital Safety and Security, Atingi (2026)
- ALX Data Science Program: intensive training in data science, machine learning and applied problem solving (09.2025 – 06.2026)
- Professional Foundations, ALX Africa (completion certificate)
- The Python Programming for Everyone (Immersive), Udemy
- Online leadership course, Aspire Institute (2026)
- Presentation certificate, ICIIP 2025, Jaypee University

LEADERSHIP & VOLUNTEERING

- Learner Success Champion, ALX Africa (10.2025 – 12.2025): supported learners in their technical and professional development.
- President, French Club, Covenant University (11.2023 – 10.2025): taught French and coordinated events.
- Vice President, International Students Association (10.2024 – 10.2025): coordinated community events.
- Head of Media Unit, Postgraduate Fellowship (07.2024 – 07.2025): led the sound and visual production team.
